

The Niteowl Advantage II alert system is a multi-purpose electronic watchman for industrial applications; it is designed to automatically call or text an unlimited amount of phone numbers repeatedly until someone is alerted that the temperature of the monitored product exceeds the preset high or low limits or when abnormal conditions exist.

KEY FEATURES:

- If there is power or motor starter failure, an alert will be sent to your preset telephone numbers.
- If an intruder or smoke is detected, the system will send text alerts to the preset telephone numbers.
- Remote accessibility which allows an immediate update of plant conditions available 24 hours a day/seven days a week from any location.
- An integrated microphone allows a caller to "listen in" for 10 seconds with each call to detect and monitor sounds or voices at the plant.
- A rugged and reliable backup battery that automatically charges and provides 6 hours of continuous operation should AC power fail.
- A temperature probe in a stainless-steel drywell or surface-mounted temperature sensor to continuously monitor temperature levels is available.
- Easy to use touch screen that allows the plant operator to set various control ranges, including time, phone numbers to text for alerts, number of rings before incoming calls are answered, high and low temperature alarm limits and identification numbers among other programmable features.
- Simple and fast installation.
